

Talking Cents with Kids

A guide to help educate
children about money

Bank of
Ireland

This guide has been created for parents with children up to the age of 12. The content has been written to promote good money habits and general money awareness. By familiarising children with concepts like planning, saving, sharing, spending and setting goals, parents can set their children up for a life of good money habits.

It is divided into two main sections. The first is for children aged 5 to 6 years of age; the second for children aged 7 to 12. It includes many easy lessons and helpful games and activities.

Talking Cents with Ollie is an important part of Bank of Ireland's Financial Wellbeing Programme which has been created to enable people develop a better understanding of how money works. The purpose of the Financial Wellbeing Programme is to empower people to make informed financial decisions and ultimately support better financial decision making for themselves and their families.

If you would like to find out more about other elements of our Financial Wellbeing Programme, please visit www.bankofireland.com/financialwellbeing

Welcome

Meet Ollie the Owl, whose goal is to continuously learn about how the world works. Recently, Ollie heard about money and wants to learn more. So let's get started on Ollie's journey of discovery and find out what money is all about!

Ollie's Money Discovery

Section 1:

For children up to 6 years old

Here's what we'll cover:

1. How paper money and coins have different values?
2. How different goods and services have different prices?
3. How planning helps people to choose what to do with their money?
4. How spending, saving and sharing are ways to use money?
5. How sometimes people can borrow an item, or even money, if they promise to return it?

Money

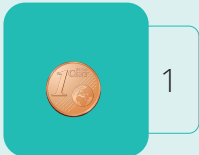

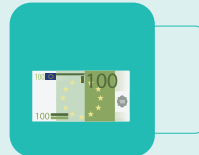

In this activity, you will be encouraging children to consider what money is, and showing them how various notes and coins have different values.

What is money? Money is a tool that people use to pay for items.

Activity 1: Values of notes and coins

Look at the Euro notes and coins and:

1. Describe the notes and coins by appearance and name them.
2. Place them in order of value (smallest to largest).

1c 	50 euro 	1 euro 	2c 	100 euro 
200 euro 	10c 	10 euro 	500 euro 	20c 
20 euro 	5 euro 	2 euro 	50c 	5c 

The next time you and your child/children are buying something together in a shop, let them pay for the items and receive the change.

Activity 2: Create your own currency

Encourage children to create their own coin and note in the space below. You can show them currencies from around the world to inspire them.

1. _____

2. _____

3. _____

4. _____

Planning

Planning helps people choose what to do.

Activity 3: Surprise Party

Make a list of items you might need to buy if you were going to throw a surprise Birthday party for a friend or someone in your family.

1. _____	5. _____	
2. _____	6. _____	
3. _____	7. _____	
4. _____	8. _____	

Make a list of the people that you would invite to the party and sort the list by category e.g. parent, sibling, grandparent, classmate, friend, neighbour.

1. _____	5. _____	9. _____
2. _____	6. _____	10. _____
3. _____	7. _____	11. _____
4. _____	8. _____	12. _____

Lesson: Planning requires thinking and organising. It helps people to know what they need to get and to choose what to do with their money.

Spending

Here we want children to consider items they may wish to buy and the cost of those items.

Activity 4: The birthday party costs

Beside each of the eight items purchased in Activity 3, list how much they think they cost.

1. € _____	4. € _____	7. € _____	
2. € _____	5. € _____	8. € _____	
3. € _____	6. € _____		
Total Item Cost € _____			

Lesson: Different items cost different amounts.

Activity 5: Similar item, different prices.

Next time you go food shopping, make a shopping list in advance. From that shopping list, ask the child to select 5 items. Of the 5 items, ask the child to make a note of the most expensive and least expensive price that item could be purchased for at the shop.

This will encourage comparison shopping. You want them to learn that there are many options to buy the same thing. You can use this lesson in later exercises.

Spending and saving

Here the aim is to show children that if they have money and only spend some of it, the rest of it can be saved for a future activity or shop visit.

Planning to spend

Planning allows us to understand what we need to undertake a journey. If we travel from one place to another, it means we will need to know how to get there, including which roads to take and the time it will take us.

The same is true when it comes to shopping. Planning is important because it allows us to work out how much money we will need to purchase items at a future date.

Activity 6: Work out how much Ollie the Owl can save.

Ollie received €10 as a present for helping with the supermarket shopping. If Ollie does not spend the €10, how much could Ollie save?

€ _____

If Ollie spent €5 of the €10 received, how much could Ollie save?

€ _____

If Ollie saves €2 every day, how much could Ollie save in 30 days?

€ _____

Lesson: You can choose to spend or save money. Saving is important as it allows us to have some money for future events and needs.

Activity 7: Places to save

Ollie the Owl plans to save €30 for an upcoming trip away. List some places Ollie could keep the €30 to make sure it is safe?

1. _____
2. _____
3. _____

Remember, no matter where Ollie the Owl saves the €30, it is still Ollie's own money, and Ollie can decide how to use it.

Lesson: The money you save in a secure place is just being stored there, and it is yours to use whenever you want to access it.

Sharing and borrowing

Sharing and borrowing are important within a family or group of friends. Here, we explore how it is important to return items that we borrow in good condition.

Activity 8: Are sharing and borrowing the same?

Alex asked if he could borrow a games console from Ollie. Ollie agreed to lend the console to Alex.

Who owns the games console?

1. Ollie the Owl

2. Alex

What should Alex do with the games console when he is finished with it?

1. Keep the games console

2. Return the games console to Ollie the Owl
in the same condition he borrowed it

Lesson: Sharing and borrowing items are not the same as owning them.

Section 2:

For children aged up to 12 years old

Ollie the Owl is curious about money. Every day Ollie sees people and businesses use money to buy and sell all sorts of things. So Ollie decided to investigate what money really is and explore how people get it and look at how they spend it. Let's join Ollie on a journey, to discover more about money.

Here's what we'll cover:

1. Money is a tool
2. Where money comes from
3. Needs and wants
4. No bottomless money-pit
5. Putting your child in the driver's seat
6. Showing them how to plan
7. Money needs a roadmap to keep us on track

Money is a tool

This section is aimed at promoting a better understanding of the role of money in our community. For example, it is a means of exchange, a unit of account and a store of value. But for now, let's help children to understand that money is a really valuable tool, one they need to use carefully.

10 interesting facts about money

1. 6,000 years ago, before coins and banknotes, people used to pay for things like apples with milk. It was a system called barter.
2. 3,000 years ago, those living in modern-day China used seashells to pay for various goods.
3. 2,500 years ago, the first versions of modern money were made out of metals such as gold and silver.
4. Before the Euro, Ireland printed its own money. It was called the Punt.
5. Before the Punt, up until 1979, the Pound was the currency of Ireland. It was linked to UK Sterling.
6. Credit cards were first used in New York City in the 1950s.
7. 343 million people use the Euro as their day-to-day money.
8. Over 1.3 billion Chinese people use the Yuan as their currency.
9. In the USA, cotton is used to manufacture Dollar bills.
10. In Sweden, more people pay for purchases using digital payments like cards or apps, than with cash.

Today we are starting to see a new type of money called digital or crypto-currency, like Bitcoin, and many more.

Activity 1: Challenge your child to list some everyday items we pay for, this could include:

Food

TV

Clothes

Treats

Petrol / diesel

Concert tickets

Phone top-up

Cinema tickets

Public transport

Word Focus

Borrow means you have to return the item in the future; this could be the next day or several weeks later. It also means that the person that lent you the item will probably want to receive it back in the same condition as when you borrowed it.

Barter means to trade one item for another, with the goal of getting a 'fair' trade. If one person has a ball worth €1 and their friend has a toy car worth €2, and both agree to trade the ball and toy car, is this a fair trade?

Question Time

Would you consider the following a fair exchange in value or an unfair exchange?

1. Trade a car for a bicycle. Fair or unfair?
2. Trade a full day working for an old pair of runners. Fair or unfair?
3. Pay €5,000 for a 10km bus journey. Fair or unfair?
4. Pay €100 for one litre of milk. Fair or unfair?
5. Trade a rare coin for a rare stamp (both of equal value). Fair or unfair?

Activity 2: List three ways that you can acquire something without using money

The list could include the following:

1. Borrow

2. Barter

Lesson: Money is a valuable tool.

Where money comes from

Unfortunately, money doesn't actually grow on trees. So it's important for children to understand that money must be earned. But earning money can happen in many different ways.

Here are 5 important points about earning that children can learn from an early age.

1. People work to earn money.
2. People who work for others are called employees.
3. Some people choose to work for themselves. These people are called 'self-employed'.
4. People that earn income pay tax on that income.
5. Tax reduces the amount of income a person gets to keep for themselves.

Activity 3: Time to think

What do you want to be when you grow up?

Will you be an employee or self-employed?

List 2 times you received money from someone else?

(Hint: birthday present, pocket money)

Do people ever work without getting paid? (Hint: volunteers)

List some situations where volunteers might help out for no pay. (Hint: to help others, to help communities, to help in organising sports events).

Activity 4: Match that job

1. Karen was feeling ill. She made an appointment to see her _____.
2. Patrick owns a farm. When one of his animals became ill, he called the _____.
3. Gary's electric cooker stopped working. He called the _____ to check out the problem.
4. Peter saw smoke and flames coming from a house, he called the _____.
5. Eddie works in a school educating students. Eddie is a _____.
6. Joan's car is making a strange sound. She visits her _____ to fix the problem.

- 
7. John has an aching tooth, he called his _____ to get treatment.
 8. Karen makes cakes for parties. Karen is a _____.
 9. Edward writes for the newspaper. Edward is a _____.
 10. Susan helps the local sports club for no pay. Susan is a _____.

Answers: Doctor, Vet, Electrician, Fire brigade, Teacher, Mechanic, Dentist, Baker, Journalist, Volunteer.

Activity 5: Tax

Income Tax is money adults pay to the Government from their salary or wages when they earn income. Tax is collected by the Government and is used for lots of things in the community, for example nurses, doctors, roads, ambulances and fire brigades.

1. Louise earns €60 and pays €15 tax. How much does Louise keep?
2. Tony earned €300 and paid €85 tax. How much does Tony keep?
3. Shane volunteered his time for 1 day, helping at a local community event. Does Shane have to pay tax? If not, why not?

Answers: 1. €45. 2. €215. 3. No, Shane pays no tax since he earned no income while volunteering to support his local community.

Lesson: People work to earn money and pay tax on the money they earn.

Activity 6: Payslip.

Here is a sample of a simplified payslip

Discuss the items listed on the sample payslip.

1. What is the difference between the Gross pay and Net pay?
2. What are the deductions?

There are a number of taxes which are applied to income earned, three of the most common are below:

- ▶ Pay as you Earn or PAYE is a tax on income that you earn from employment, this is deducted from your wages by your employer on behalf of the Irish Government.
- ▶ Pay Related Social Insurance or PRSI is paid by employees and employers and it is used for the social insurance fund in Ireland.
- ▶ Universal Social Charge or USC is a tax on income.

FUTUS Limited
123 Main St
Ballymoney

PPSN: X12345J
Employee Number: 123XYZ

Gross Pay	€3,000
USC	€120
PAYE (Tax)	€250
PRSI	€150
Pens	€100
LPT	€50
Net Pay	€2,330

Needs and wants

Throughout life, and on a day-to-day basis, we see lots of advertising messages that are designed to encourage us to spend our money.

When it comes to managing money, it's important to understand the difference between a NEED and a WANT.

A NEED is something essential, like food and clothing.

A WANT is not an immediate priority, but is something you would like to have.

Activity 7: Choose whether each of the following fits better in the NEEDS box or WANTS box

Need	Want	Phones	Need	Want	Clothes
<input type="checkbox"/>	<input type="checkbox"/>	Basic Phone	<input type="checkbox"/>	<input type="checkbox"/>	Shoes on sale
<input type="checkbox"/>	<input type="checkbox"/>	Premium Smart Phone	<input type="checkbox"/>	<input type="checkbox"/>	Premium brand of runners
		Water			Car
<input type="checkbox"/>	<input type="checkbox"/>	Basic bottle of water (or water from the tap)	<input type="checkbox"/>	<input type="checkbox"/>	Basic model to get from A to B
<input type="checkbox"/>	<input type="checkbox"/>	Expensive flavoured bottled water	<input type="checkbox"/>	<input type="checkbox"/>	Most expensive model with all the latest gadgets

Activity 8: The role of advertising

Pick a day or a time during a day and ask children to count the number of ads they see, you can help them if they don't notice them all.

Discuss why companies make ads and what they hope consumers might do when they have seen an ad.

Then, considering all the ads they saw, decide if more ads were for things people need or people might want.

Lesson: A need is something essential, a want is something that might not be essential but something you would like to have.

No bottomless money pit

Money is not endlessly available and it can, and does, run out. You have already discussed some day-to-day issues about money – that it's a tool, that it has to be earned, that there are many tempting ways to spend it. It's now time to progress to helping your child think about how they would use money for a range of everyday activities and items. The one thing you must convey is that money can run out and that “when it's gone, it really is gone”.

Activity 9: Consider upcoming activities and costs

1. List 5 grocery items you plan to buy (including some you know your child really likes).
2. Choose items that offer a range of own-labels and more expensive brands.
3. Put some cash in a purse – enough to cover the approximate cost of the items.
4. Then ask your child to go buy those items and pay for each thing at the till using the cash in the purse.
5. See how they get on. It will be interesting if, when using 'their' purse, they look for bargains or go straight for the top-of-the-line products.

Lesson: Money is a limited resource and it can run out.

Money boss

Now we have gone through some lessons and theories on money, it's time to graduate to the practical aspect of how to use money.

Here, you will be providing your child with a personal budget to navigate his or her own way around (under your supervision). A simplified daily/weekly budgeting planner is included with this guide. The important point is that you are giving them the freedom to choose how to use money.

Observe how they use it. Reinforce the messages that money is precious, that it needs to be earned, and there are so many places enticing us to spend it. Also, remind your child that money is essential for so many day-to-day things, like paying for food, transport and clothes, so they should know how to manage it in order to have it when they might need it most.

Activity 10: Spending must be balanced against saving

- ▶ Talk to your child about something they really WANT but they do not have enough money saved to buy at present. They should have a good idea of the cost of the item, but if not, do an online search and find the best price (this is an important lesson on price comparison).
- ▶ Next, sit with your child to review how much they have in savings or, if they receive it, weekly pocket money and work out what the shortfall is.
- ▶ Next, help them work out how long it would take to buy it if they saved all, half, or a quarter of their pocket money each week.
- ▶ Help your child to decide their best savings option to reach their target.
- ▶ Create a Budget Calendar, marking the daily or weekly amount targeted and reached to keep them motivated to reach their goal.

Consider offering a reward or bonus in the last week if they have been staying the course.

Activity 11: Put €5 to the test!

Let's see how far €5 goes today.

- ▶ Give your child €5 and invite them to spend it on whatever they choose in the supermarket.
- ▶ Next, bring them on a trip to a main shopping street or in a shopping centre and repeat the €5 test. They can spend it as they please.
- ▶ Now, ask them to recall how easy it was to find something to buy for €5. Did they buy something they really wanted?
- ▶ Ask if it was easier to find something in the supermarket than in the main street or shopping centre.
- ▶ Ask if they spent the €5 on a **NEED** or a **WANT**.

Lesson: A savings goal and budget plan can help work out the best approach to saving for a goal.

Did you know...?

In 1980, you could buy a standard bar of chocolate for about 20 cent.

Showing them how to plan

Planning for longer term money goals is something that all families need to do from time to time, especially if they have a specific target in mind. If you have a car loan, you must pay it off over time and in order to do so, you need to have income and manage your budget accordingly.

If you plan to buy a car without a loan, you need to save. Again, you will need to earn income and not spend all of it if you want to reach your savings goal. This is the type of lessons your child will benefit learning and the following exercise is designed to support that learning.

Activity 12: Tracking expenses versus income

Allocate a budget to a particular week or month. This budget should cover all outgoings for the family. Make a note of where this money / income came from (for example, salary or wages).

- ▶ Record the amount you spend during the week – whether that is in a shop, online or via a direct debit
- ▶ After spending, subtract the amount from the budget you allocated and show the workings to your child.
- ▶ The idea here is to demonstrate that the balance on the budget is reducing.
- ▶ Repeat the activity and, if you are doing it regularly, your child should see that there are a lot more instances where money is spent than there are where money comes in.

Lesson: Tracking expenses on a budget plan can illustrate how a bank balance will reduce each time we spend.

Money needs a roadmap to keep us on track

Children of all ages stand to benefit from discussion on some important facts when it comes to money. For example, it is an essential tool. It must be earned. It needs to be managed. It is not endless. There are many temptations to spend it.

For this final activity, what you really need to assess is your child's attitude to money and how they will actually manage it. Get them to plan a budget for something they

want to do. By looking at all the costs in advance, they'll find they can make their money go a lot further. Remind them of how they can compare prices. There is a daily budget tool included to help them plan their weekly spending (make copies if necessary) and give them the freedom to be their own money manager. Note: this activity is especially relevant for children 10 – 12 years of age, but younger children can also learn from the exercise.

Activity 13: Planning the budget

Set a budget for an upcoming event.

- ▶ Track all of the costs of the event – for example, if you drive or take a bus, factor that into the total cost. Also, if you have parking costs, account for that too.
- ▶ If the trip is to a restaurant, list out the cost of each meal that each person got. Don't forget the soft drinks and desserts, and the tip!
- ▶ At the end of the trip, match back the budget that was originally set and add up the final cost of the trip (if you drove, use 50 cents per kilometre).
- ▶ Finally, examine and discuss whether or not you **BLEW** the **BUDGET** or **KEPT** within the **BUDGET**?

Lesson: Setting a budget and identify costs in advance can help us to decide what, and how much, to spend.
